Art Unit: 2182

## **DETAILED ACTION**

1. Claims 1-29 are presented for examination.

## Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- 3. Claims 1-29 are rejected under 35 U.S.C. 102(a) as being anticipated by Richter et al., US Publication no. US 2003/0046396 A1.
- 4. In re claim 1, Richter et al. shows a system [fig 6] for executing write and read data commands [request for content, paragraph 0214; fig 5, 105], the system having a buffer pool [buffer pool, paragraph 0021] of blocks for temporarily storing write data to be sent to a peer device and read data received from the peer device, an apparatus for managing read and write data congestion in the buffer pool [fig 5], the apparatus comprising:

a processor [320, fig 6] programmed for preventing an initiation of a new read or write data command [135, 165, fig 5] until pending read and write data commands have been processed [paragraph 0217, lines 4-7] enough to free up sufficient blocks in the buffer pool to accommodate the data of the new read or write data command [paragraph 0218, last 6 lines; 135, 140 in fig 5].

5. In re claim 2, Richter et al. shows determining a number of blocks that will be required to store the read or write data for the new read or write data command [paragraph 0216, last 3 lines; 115 in fig 5];

Application/Control Number: 10/609,291

Art Unit: 2182

determining a number of free blocks in the buffer pool [120, 125 in fig 5]; and throttling the new read or mite data command if the number of free blocks is insufficient to store the read or write data for the new read or write data command [135, 150, 165 in fig 5].

- 6. In re claim 3, Richter et al. shows a receive list memory which contains descriptor pointers to free blocks [120, fig 5], and a free list memory which contains descriptor pointers to free blocks not referenced in the receive list memory [120, fig 5], and determining the number of free blocks in the buffer pool by summing the number of free blocks in the receive list memory [125, fig 5].
- 7. In re claim 4, Richter et al. shows initiating the new read or write data command if the number of free blocks is sufficient to store the read or write data for the new read or write data command [135, 140, 145 in fig 5].
- 8. In re claim 5, Richter et al. shows a receive list memory which contains descriptor pointers to free blocks and blocks filled with read data [120, fig 5], and a free list memory which contains descriptor pointers to free blocks not referenced in the receive list memory, the processor further programmed for determining the number of free blocks in the buffer pool by:

summing the number of free blocks in the receive list memory and the free list memory [125, fig 5]; and

adding the sum to a number of blocks estimated for storing incoming read data for any pending read data commands [required resources will be available to process, paragraph 0217].

- 9. In re claim 6, Richter et al. shows the processor further programmed for executing the new read or write data command if the number of free blocks is sufficient to store the read or write data for the new read or write data command [135, 140, 145 in fig 5].
- 10. In re claim 7, Richter et al. shows storing the throttled new read or write data command and any subsequent new read or write data commands into a first-in-first-out (FIFO) read/write command request queue [165, fig 5];

processing pending read data commands to completion to free up blocks in the buffer pool [115, 120, 135 in fig 5]; and

executing a next read or write data command from the read/write command request queue if the number of free blocks becomes sufficient to store the read or write data for the next read or write data command [145, fig 5].

- 11. In re claim 8, Richter et al. shows upper layer protocols [paragraph 0108].
- 12. In re claim 9, Richter et al. shows an iSCSI controller circuit [paragraph 0117].
- 13. In re claim 10, Richter et al. shows a host computer [fig 1A].
- 14. In re claim 11, Richter et al. shows a storage area network (SAN) wherein an iSCSI network is coupled to the iSCSI controller circuit and one or more storage devices are coupled to the iSCSI network [paragraphs 0198, 0194, 1117].
- 15. Claims 12-22 are rejected under the same rationale as discussed above in claims 1-11.

Application/Control Number: 10/609,291 Page 5

Art Unit: 2182

16. In re claims 23-29, Richter et al. teaches the apparatus to carry out the operations as set forth in claims 1-11. Therefore, Richter also teaches the method steps in using the apparatus.

## Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Further references of interest are cited on Form PLO-892, which is attachment to this office action.

Any response to this action should be mailed to:

Mail Stop \_\_\_\_ Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

The centralized fax number is 703 872-9306.

The centralized hand carry paper drop off location is:

U.S. Patent and Trademark Office 2011 South Clark Place Customer Window Crystal Plaza Two, Lobby, Room 1B03

Any inquiry of a general nature or relating to the status of this application should be directed to the central telephone number (571) 272-2100.

Art Unit: 2182

Direct any inquiries concerning drawing review to the Drawing Review Branch (703) 305-8404.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Harold Kim whose telephone number is 571-272-4148. The examiner can normally be reached on Monday-Thursday 6AM-4PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jeffrey Gaffin can be reached on 571-272-4146. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
